OVERVIEW

 Problem Set 1 > Tracking Versions Using Git Quiz

## Tracking versions using Git

Check all the statements that would be true if you tracked changes using Git:

- ☐ You would be able to see the difference between the two versions, but you would no longer be able to directly access the old version.
- ☒ Using `git diff` to compare the two versions would show the same changes as `diff -u` did in the previous exercise.
- ☐ The name of the file would change when you saved a second version in Git.
- ☒ To save two versions of the file, you would create two commits.

 **Correct!**

Great job!
