

# How to Use Git and GitHub

Lesson 3 > Simulate Sarah's Changes Solution

DASHBOARD

CLASSROOM

## Which commits exist where?

The commit by Larry adding the chili recipe should have been in both places, since it was present in the original repository before you forked it. Your commit adding a new spice should only have been present locally, since you made the commit locally but didn't push. The commit by Sarah removing cumin should only have been present on GitHub, since Sarah made the change and pushed it to GitHub, but you didn't pull yet.
