MATERIALS

DISCUSSION

OVERVIEW

Sharing changes on GitHub

- Create a reflections repository on GitHub
- Push your reflections to GitHub
- Post a link to your reflections on the forums

Check here when you're done: ☒

Correct!

Great! Consider also taking a look at what other students have posted and comparing their thoughts to yours.

We encourage you to be bold in sharing your reflections on GitHub. If you're not happy with any of your responses, the best solution is to update that response in one or more new commits. The previous response will still be visible in the commit history, but updating your perspective over time is part of the learning process! Having a commit history that shows your updating perspective will reflect well on you, not poorly.

That said, if you've written anything in your reflections repository that you are not comfortable sharing, you can checkout the commit before you introduced that change, create a new branch at that point, and commit any other changes you are willing to share to the new branch. Then, by only pushing your new branch, you can keep the changes on your original branch private.
